

### CINEBUS – MOBILE FILM STUDIO

Cinebus provides production and post-production service for intimate, small-scale films. It will be possible to handle the shooting, including director's preview and actor's make-up, as well as editing, archiving, performing basic image manipulations and color correction, to sound design of the finished film. Using the Cinebus it will be also possible to transport all the equipment needed to make these intimate, small-scale films. A tent hall attached to the bus will become a screening-lecture room (interchangeably with a small blue-screen studio) which will allow presentations and promotion of the resulting films.

### NEW PRODUCTION MODEL

In Poland (and in other countries) we work in an inefficient system that has not changed for years. Main features of the new production model are the following:

- **Quality** – risk management which means that in addition to the script we will be making pre-visualizations (film drafts)
- **Savings** – financing model successfully introduced in the UK by "Microwave" Film London's micro-budget feature filmmaking scheme
- **Organization** – time management in film production – more efficient use of production time thanks to a new organization of work on the set, new tools and reducing the means of transport (Cinebus)
- **Technology** – modernised infrastructure (Cinebus) and customised workflow by dropping old habits connected to the previous technology

We would like to apply the proposed model to contemporary, intimate films of young debutant directors. We are confident that under the same resources it is possible to make more films, which will enable more debutants to start careers.

### PROMOTION THROUGH WORK

Using the new production model we can promote and check in the form of shooting a Case Study of 2-3 feature films and at the same time describe the proposed changes to prove their functionality. In addition, the Cinebus will be equipped with a small camera system to allow streaming video and live tracking the progress of work on the set, which will also serve as a promotion tool for specific projects, and at the same time promoting the new system of work in which the films will be made.

### DETAILED DESCRIPTIONS OF THE NEW PRODUCTION MODEL AND THE CINEBUS PROJECT

The Cinebus – mobile film studio

Electric generator towed behind

Bus docking to a tent at the end of shooting day

Tent can be used as screening area or green - screen studio

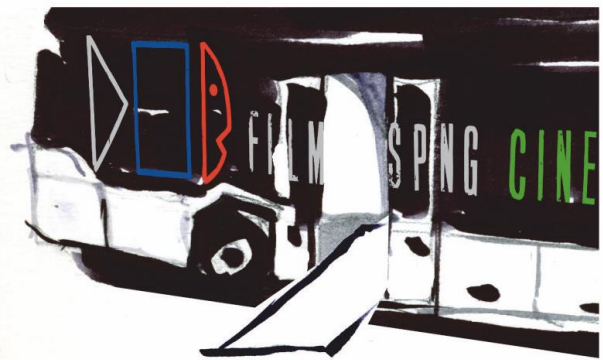

Roof rack for Long pieces of equipment

Marquis to enlarge the work space and protect equipment against bad weather

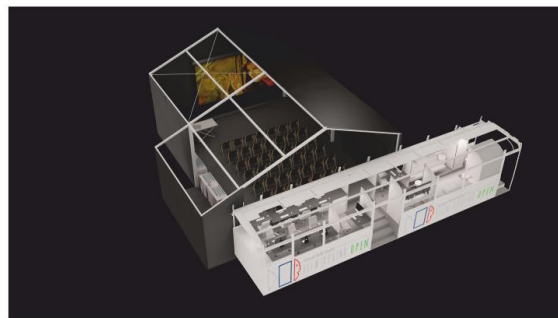

Electrical switchboard in luggage compartment

Ramp for loading; folding tables make it easy to store equipment

Rooftop antenna receiving camera covers 200 m area

Projection in a tent

Division of the Bus interior into different production units

Workplace for Editing, Color Correction and CGI

Video Village

Sound engineer's cabin

Enjoy with us cup of coffee!
